

Whirlpool

Whirlpool is a leading designer and manufacturer of home appliances and home appliance accessories.

Background

Whirlpool had a requirement to augment their internal product development team with on-site engineering support.

Thinkpath provided Pro/Engineer design personnel to meet Whirlpool's Engineering Center needs.

Thinkpath personnel assisted throughout the development process by performing solid modeling and checking form, fit & function of the designs of Whirlpool's new freestanding cook tops.

The successful completion of this project allowed Thinkpath the opportunity to provide additional in-house Pro/Engineer support. Thinkpath provided as many as five people on-site at any given time. These personnel assisted with a range of disciplines such as modeling, detailing, layout, sheet metal design, etc. Thinkpath personnel assisted with designs for; sides and back housing of convection ovens; cook tops; free standing stoves; professional residential cook tops; packaging design.

Benefits

Having Thinkpath personnel assist with the design, modeling, etc. allowed Whirlpool's team to work on their primary job function. Having Thinkpath's ability to ramp up and ramp down quickly also allowed Whirlpool greater flexibility when budgeting man-hours for projects.
