

Driltech Mission **Alachua, Florida (US Headquarters)**

Since 2002, Thinkpath has been providing Contract Placement services to Driltech Mission.

Background

Driltech Mission is a subsidiary of Sandvik Corporation located in Alachua, Florida. Driltech manufactures mobile rotary and Down-The-Hole (DTH) drill rigs for mining, quarrying, and water well drilling. Historically, Driltech produced customized vehicles to satisfy all of their customer's needs. In late 2001, Driltech changed their business model and decided to eliminate the customized vehicles and consolidate the number of vehicles to four base models. In order to accomplish this Driltech was forced to temporarily increase their engineering staff.

In January of 2002, Driltech partnered with Thinkpath as their primary resource for engineering services.

Thinkpath Solution

Thinkpath created a team of eight UG designers and drafters on-site at Driltech's facility to assist in this "re-engineering" initiative. Thinkpath utilized their proven "Technical Placement" process to interview, test and conduct reference checks to insure these individuals meet Driltech's high standards.

Benefits

By employing the "Technical Placement" process, Thinkpath has been able to assist Driltech's direct staff and build a team of dedicated employees to make these design improvements.
